1920/203 STRUCTURED PROGRAMMING July 2019 Time: 3 hours

THE KENYA NATIONAL EXAMINATIONS COUNCIL

CRAFT CERTIFICATE IN INFORMATION TECHNOLOGY

MODULE II

STRUCTURED PROGRAMMING

3 hours

INSTRUCTIONS TO CANDIDATES

This paper consists of TWO sections; A and B.

Answer ALL the questions in section A and any FIVE from section B in the answer booklet provided.

Candidates should answer the questions in English.

This paper consists of 4 printed pages.

Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.

SECTION A (40 marks)

Answer ALL the questions in this section.

- Outline four advantages of sub-programs in a computer program. (4 marks)
- (a) State two classes of data types used in C language. (2 marks)
 - (b) Explain the concept of recursive function as used in programming. (2 marks)
- A student wrote a program in C language. Outline four modes that the student would use to open a data file in this program. (4 marks)
- Write a program in C language that computes an absolute value of a given number. (4 marks)
- With the aid of a diagram, describe a queue data structure. (4 marks)
- Differentiate between machine and assembly languages as used in programming. (4 marks)
- The following program was written by a student during a practical lesson. Use it to answer the question that follows.

```
#include<stdio.h>
main()
{
  int x;
  x=1;
  do
{
    printf("x is %d\n",x);
    x+=1;
} while (x>10);
}
```

Explain the loop body. do while houp

(4 marks)

- Write a program in C language that prompts the user to enter the amount of fees paid. When
 the amount of fees paid is less that Ksh 20,000 the program displays a message 'Cyber services
 denied'. (4 marks)
- Distinguish between by value and by reference parameter passing as used in programming. (4 marks)
- 10. Outline four characteristics of high level languages. (4 marks)

SECTION B (60 marks)

Answer any FOUR questions in this section

(3 marks) 11. (a) Outline three reasons for compiling a program under development. Write a program in C language that determines if a character entered is a vowel. The (b) program then displays an appropriate message. Use switch statement. A student wrote a program in C language. Outline four programming styles he could (c) (4 marks) use to improve the readability of the program. (d) Differentiate between monolithic and modularity approaches to programming. (4 marks) (2 marks) 12. (a) Outline two types of test data used during program testing. Explain two types of errors that are encountered when developing a program. (4 marks) (b) Write a program in C language that prompts a user to enter five different marks for a (c) test in an array. The program then computes and displays the average mark correct to two decimal places. (5 marks) Write a program in C language that generates the first ten positive numbers. Use a (d) (4 marks) pretesting loop other than the For loop. Define each of the following terms as used in programming: 13. (a) (i) Reserved word; (1 mark) (ii) Dry run; (1 mark) (iii) - Order of priority. (1 mark) Write a program in C language that prompts a user to enter two integers. The program then divides the bigger by the smaller integer provided it is not a zero through a function. (5 marks) Write an algorithm that could be used to add an element in a stack data structure. (c) (4 marks) John compiled documentation for a program he wrote. Outline three parts of the (d) documentation that he could include to ease access to the information in the documentation. (3 marks) 14. State two items contained in each of the following type of documentation: (a) (i) System; (2 marks) (ii) Program. (2 marks) Outline two reasons a binary search technique is preferred. (2 marks) (b) Write a program segment in C language to assign each of the following: (c) (i) 15 to an integer variable x through a pointer p; (2 marks) (ii) The address of a float type 16.54 variable x to a pointer pt. (2 marks) 1920/203 Turn over

July 2019

(d) Table 1 show the employee monthly bonus in a manufacturing company based on sales. Use it to answer the question that follows.

Sales	Bonus Rate (%)
Above 50,001	15
Between 25,001 and 50,000	10
Between 1 and 25,000	5

Table 1

Draw a flowchart for a program that prompts a user to enter the employee's basic salary and sales. The program then calculates the gross salary and outputs employee's basic salary, gross salary and bonus.

(5 marks)

- 15. (a) Outline four advantages of using pseudo code during program design. (4 marks)
 - (b) (i) Mary created a data file in a C program. When trying to read this data file the fopen() returned NULL. Outline two possible causes of this. (2 marks)
 - Outline two functions that are used to randomly retrieve data in a C program data file.
 (2 marks)
 - (c) Draw a binary tree with nodes labelled A to G. Generate each of the following:
 - (i) Two sets of siblings; (1 mark)
 - (ii) Two ancestors; (1 mark)
 - (iii) Two forests. (1 mark)
 - (d) The data input to a program array is as follows; 54, 33, 76, 23, 15. The data is to be sorted in ascending order using the insertion sort method. Show all the steps to be taken to sort this data. (4 marks)

THIS IS THE LAST PRINTED PAGE.
